

Project 5 - SOC & SIEM

05 - Threat Hunting Evidence

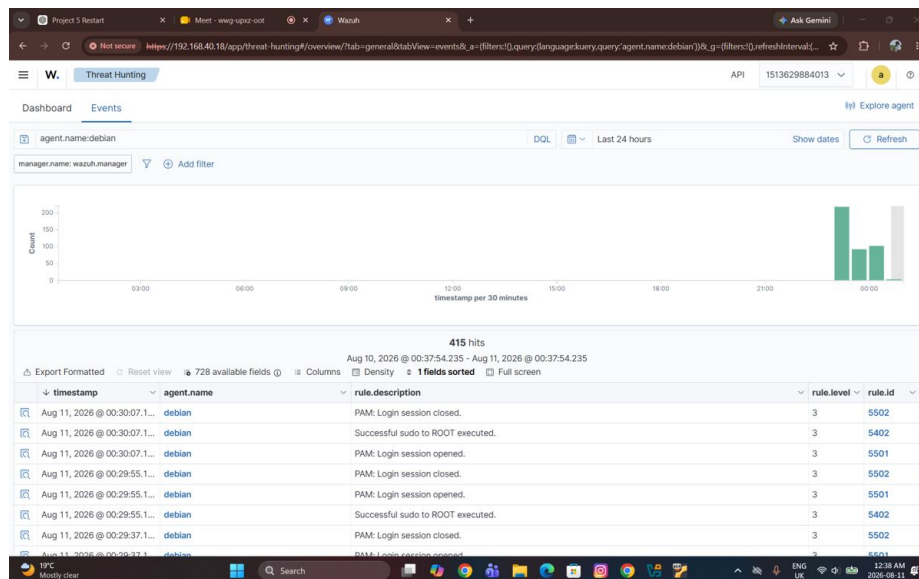

This evidence demonstrates the Wazuh threat-hunting and alert-investigation workflow, including event filtering, authentication analysis, privilege-related investigation, event correlation, and review of controlled security activity.

Wazuh Threat Hunting - Normalized Endpoint Events

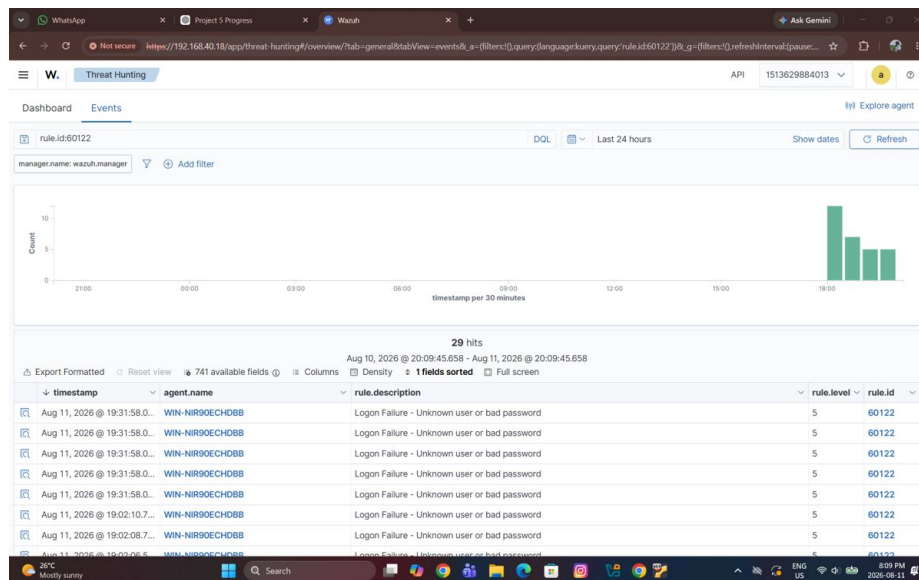

Wazuh Threat Hunting view showing normalized endpoint events available for centralized investigation.

Event Timeline and Filtered Security Activity

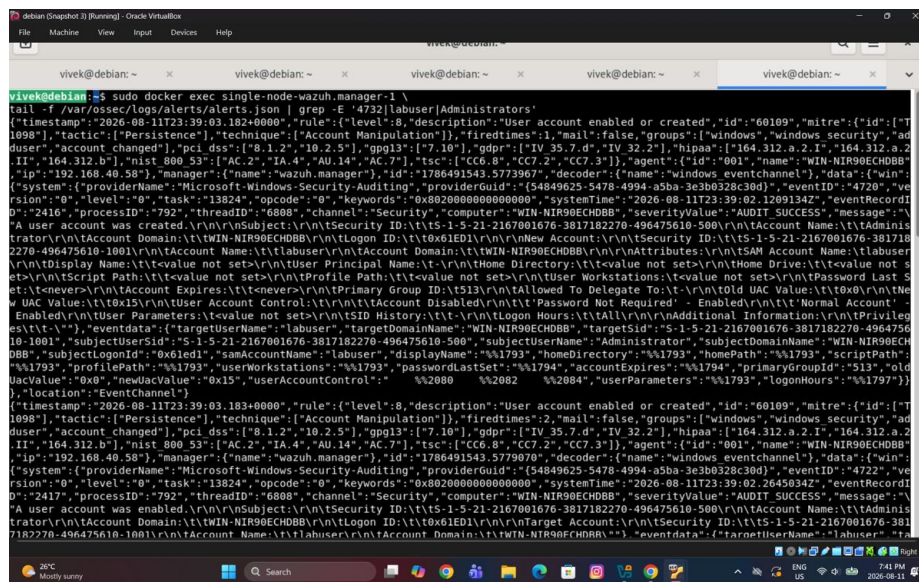

Wazuh event timeline and filtered activity used to narrow the investigation to relevant security events.

Repeated Windows Logon Failures

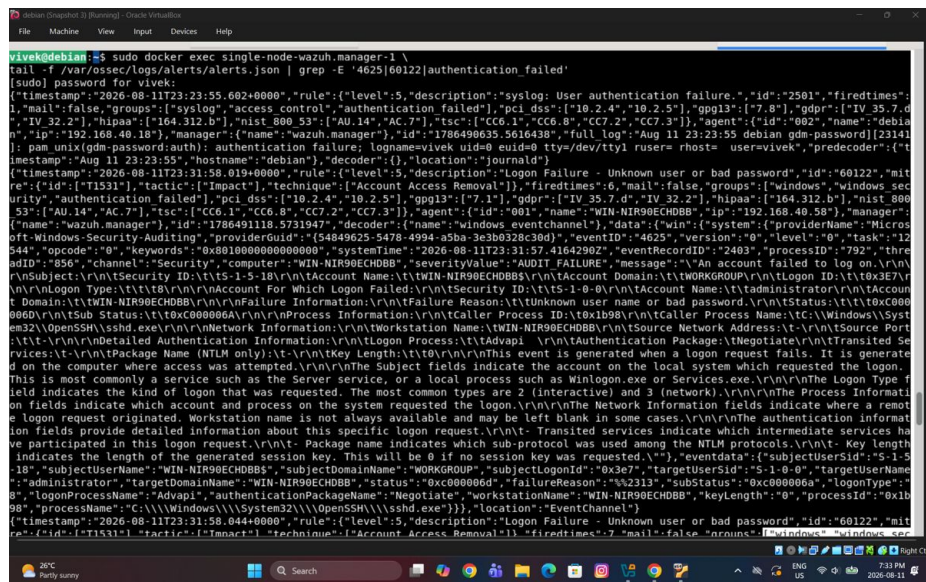

Threat Hunting results showing repeated Windows logon failures, supporting authentication-failure investigation and event correlation.

Privileged Logon Alert Investigation

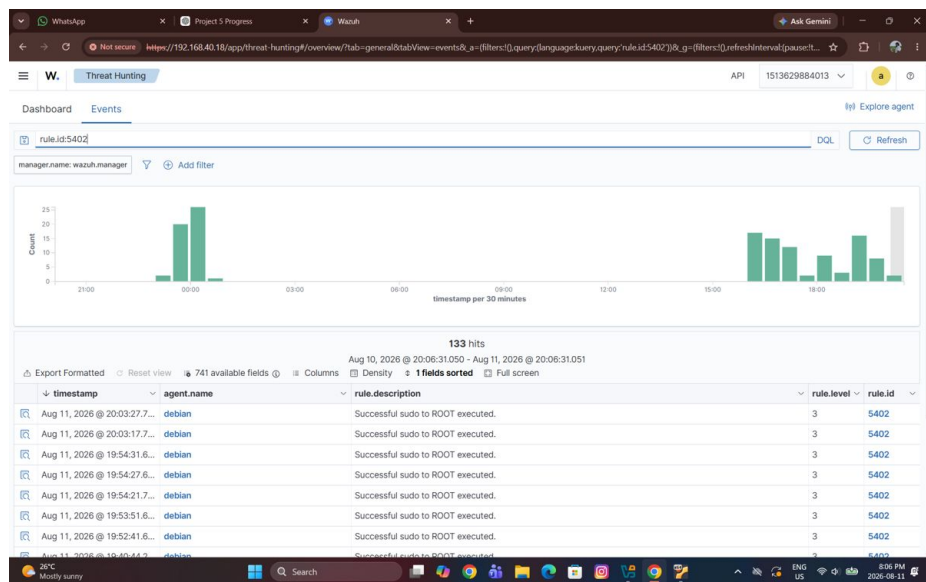

Wazuh alert evidence used to investigate Windows privileged-logon and security activity.

Authentication Event Correlation

Wazuh alert evidence used to correlate Windows authentication activity across related security events.

Controlled Security Test Review

Wazuh event view used to review activity generated during the controlled security test and validate the investigation workflow.
