

Project 5 – SOC & SIEM

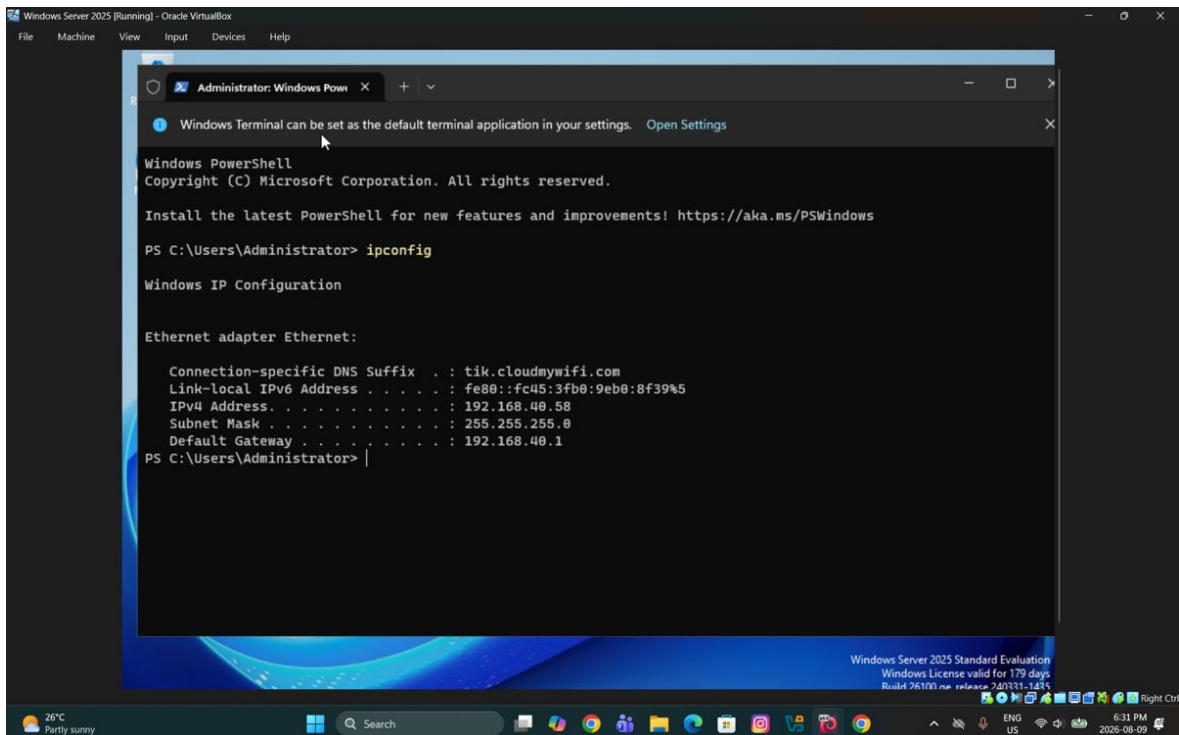

01 – SIEM Deployment Evidence

01. Windows Server 2025 network configuration and endpoint information.

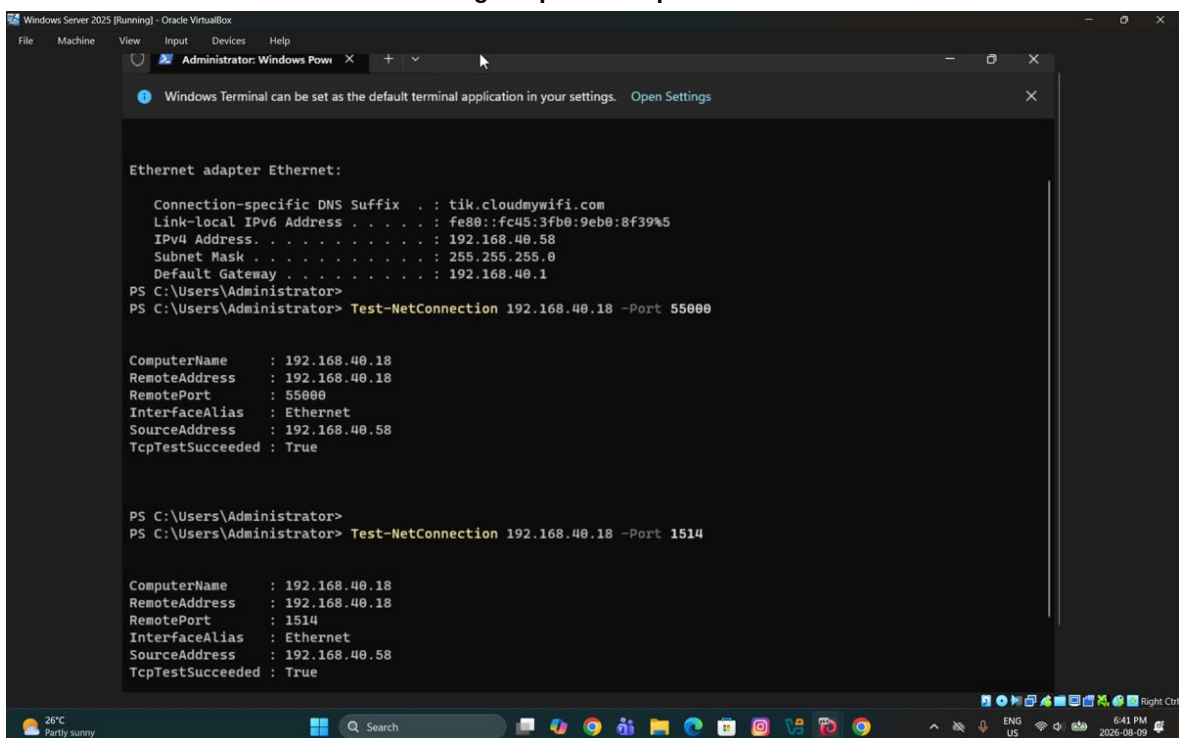

Shows the Windows Server 2025 endpoint configuration, including the active network adapter and assigned addressing information used in the lab.

02. Windows Server 2025 IP and network configuration used in the lab.

Confirms the Windows Server network settings and the IP configuration used to establish communication with the SIEM environment.

03. Windows Server command-line validation during endpoint setup.

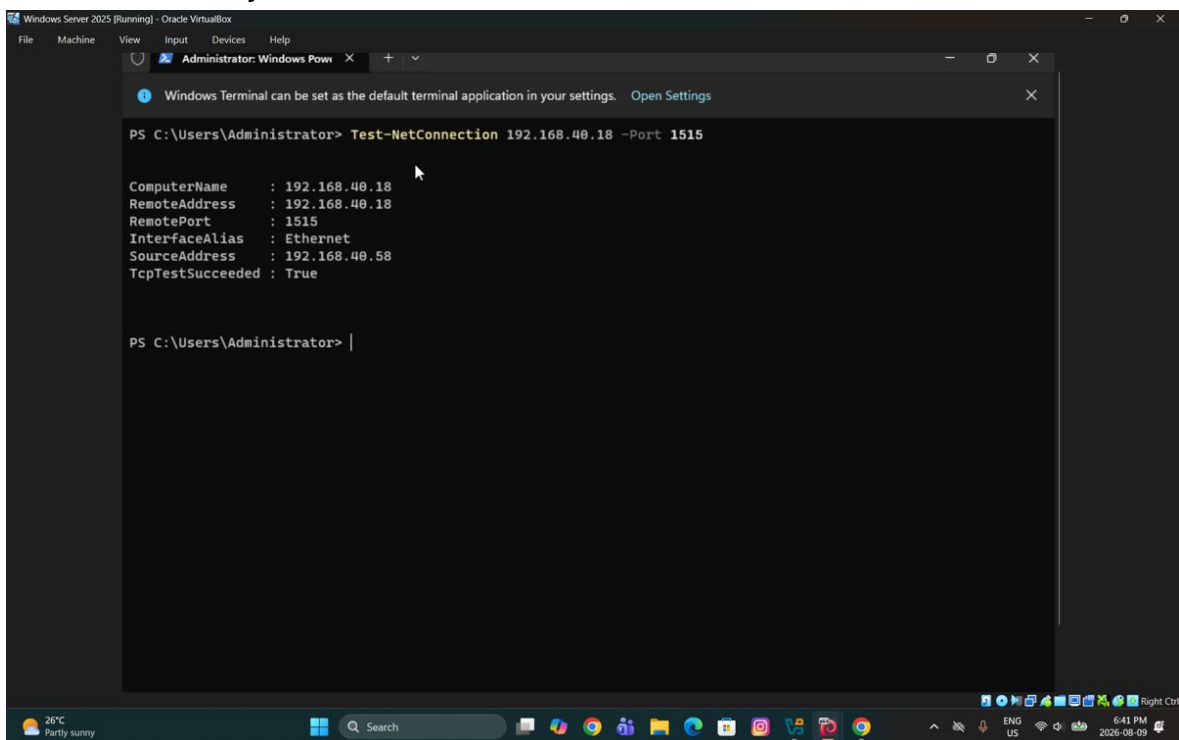

The screenshot shows a Windows Server 2025 command prompt window titled "Administrator: Windows PowerShell". It displays network configuration for the Ethernet adapter and two successful connectivity tests using the `Test-NetConnection` command.

```
Ethernet adapter Ethernet:  
  
Connection-specific DNS Suffix . : tik.cloudmywifi.com  
Link-local IPv6 Address . . . . . : fe80::fc45:3fb0:9eb0:8f39%5  
IPv4 Address. . . . . : 192.168.40.58  
Subnet Mask . . . . . : 255.255.255.0  
Default Gateway . . . . . : 192.168.40.1  
PS C:\Users\Administrator>  
PS C:\Users\Administrator> Test-NetConnection 192.168.40.18 -Port 55000  
  
ComputerName : 192.168.40.18  
RemoteAddress : 192.168.40.18  
RemotePort : 55000  
InterfaceAlias : Ethernet  
SourceAddress : 192.168.40.58  
TcpTestSucceeded : True  
  
PS C:\Users\Administrator>  
PS C:\Users\Administrator> Test-NetConnection 192.168.40.18 -Port 1514  
  
ComputerName : 192.168.40.18  
RemoteAddress : 192.168.40.18  
RemotePort : 1514  
InterfaceAlias : Ethernet  
SourceAddress : 192.168.40.58  
TcpTestSucceeded : True
```

Demonstrates command-line connectivity validation from Windows Server to the Debian/Wazuh host using `Test-NetConnection`.

04. Windows Server connectivity test to the Debian/Wazuh host.

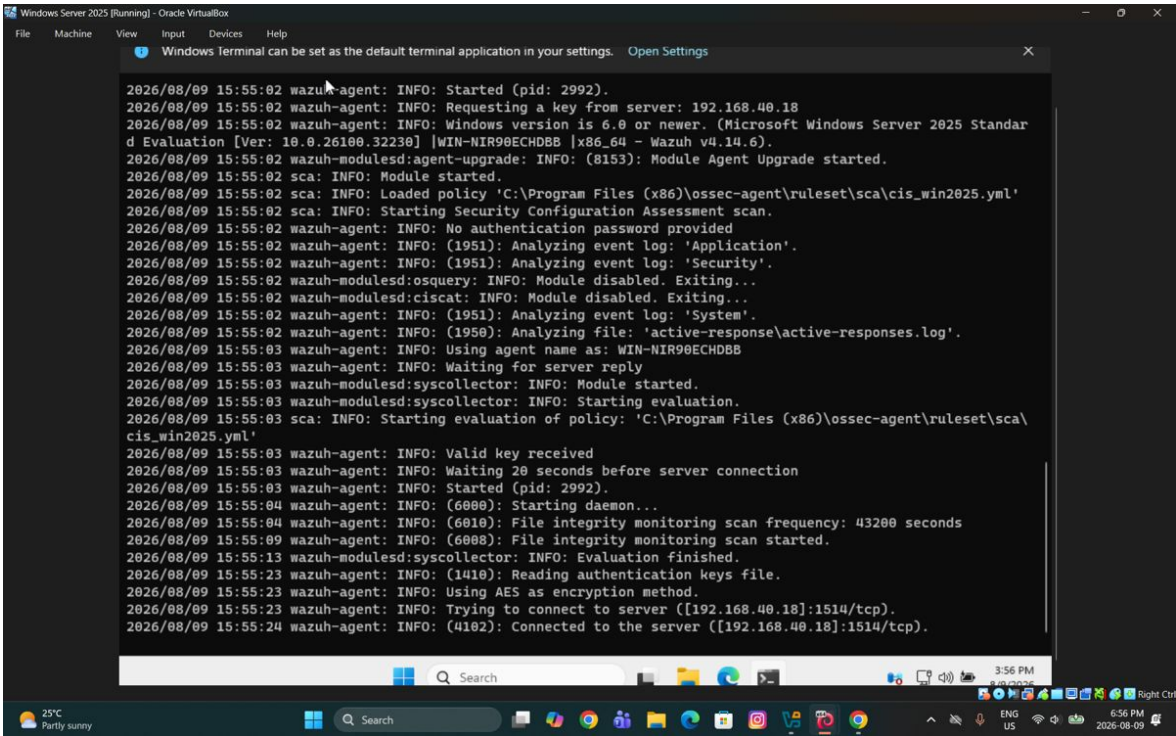

The screenshot shows a Windows Server 2025 command prompt window titled "Administrator: Windows PowerShell". It displays a successful connectivity test using the `Test-NetConnection` command to port 1515.

```
PS C:\Users\Administrator> Test-NetConnection 192.168.40.18 -Port 1515  
  
ComputerName : 192.168.40.18  
RemoteAddress : 192.168.40.18  
RemotePort : 1515  
InterfaceAlias : Ethernet  
SourceAddress : 192.168.40.58  
TcpTestSucceeded : True  
  
PS C:\Users\Administrator> |
```

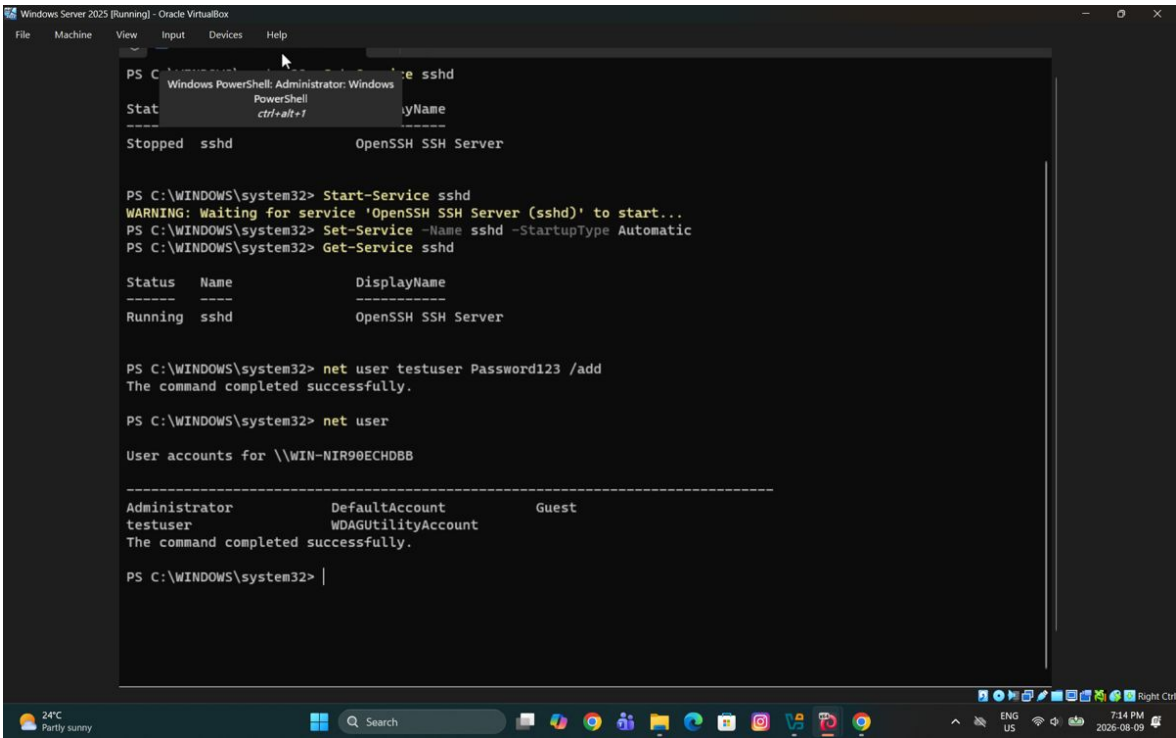

Shows successful connectivity testing to the Wazuh-related service port on the Debian host, confirming network reachability.

05. Wazuh agent startup and registration activity on Windows Server 2025.

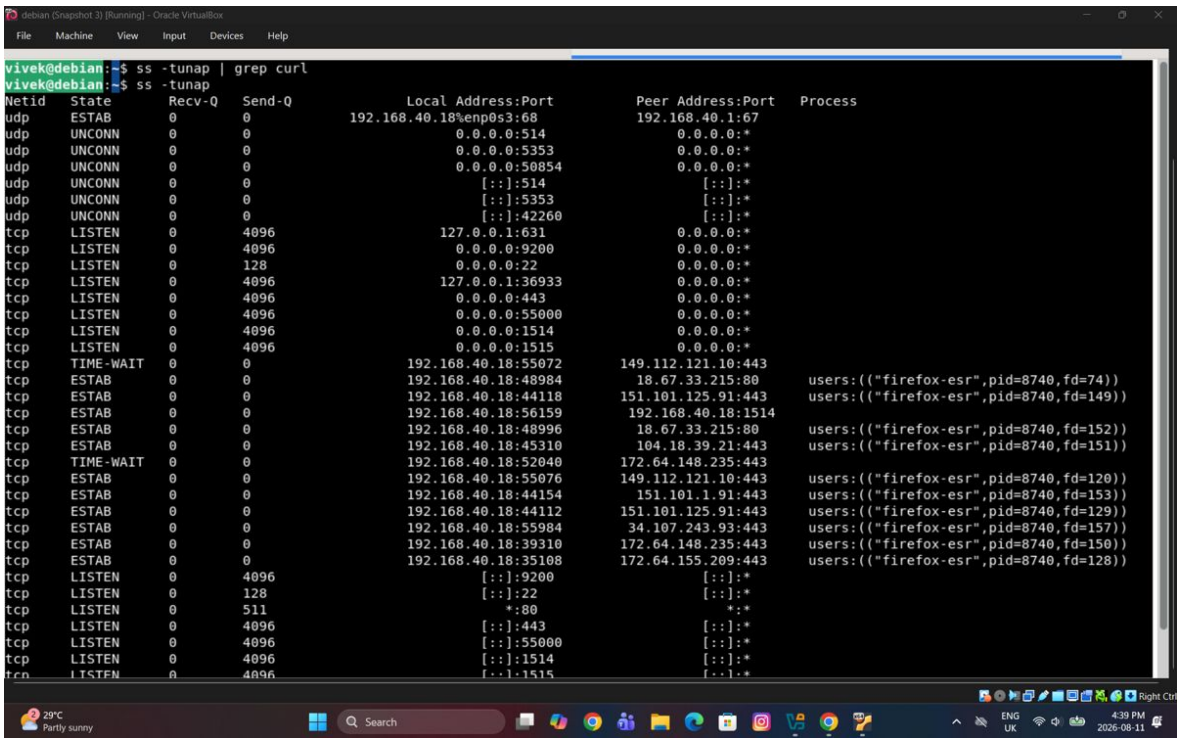

Shows Wazuh agent startup, authentication-key handling, and successful connection activity toward the Wazuh manager.

06. Windows Server OpenSSH service and local test-account configuration.

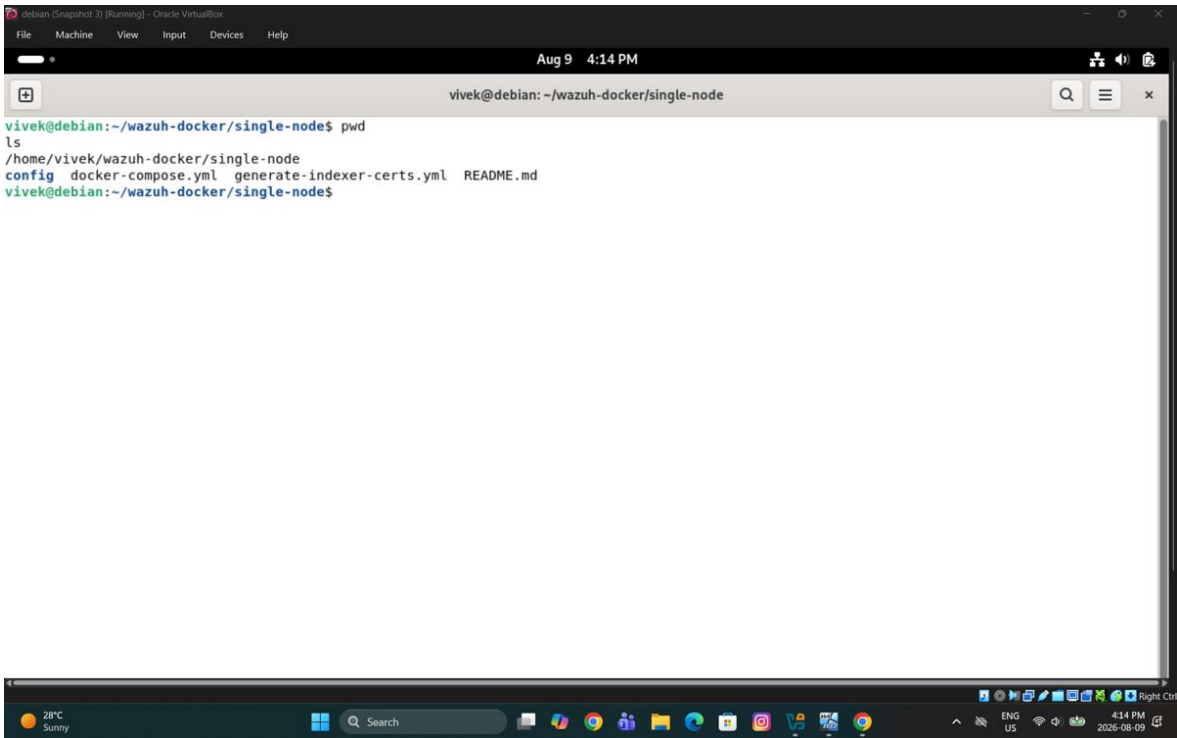

Demonstrates the OpenSSH service running on Windows Server and creation of a controlled test account used for security testing.

07. Debian listening services and network sockets, including SSH and Wazuh services.

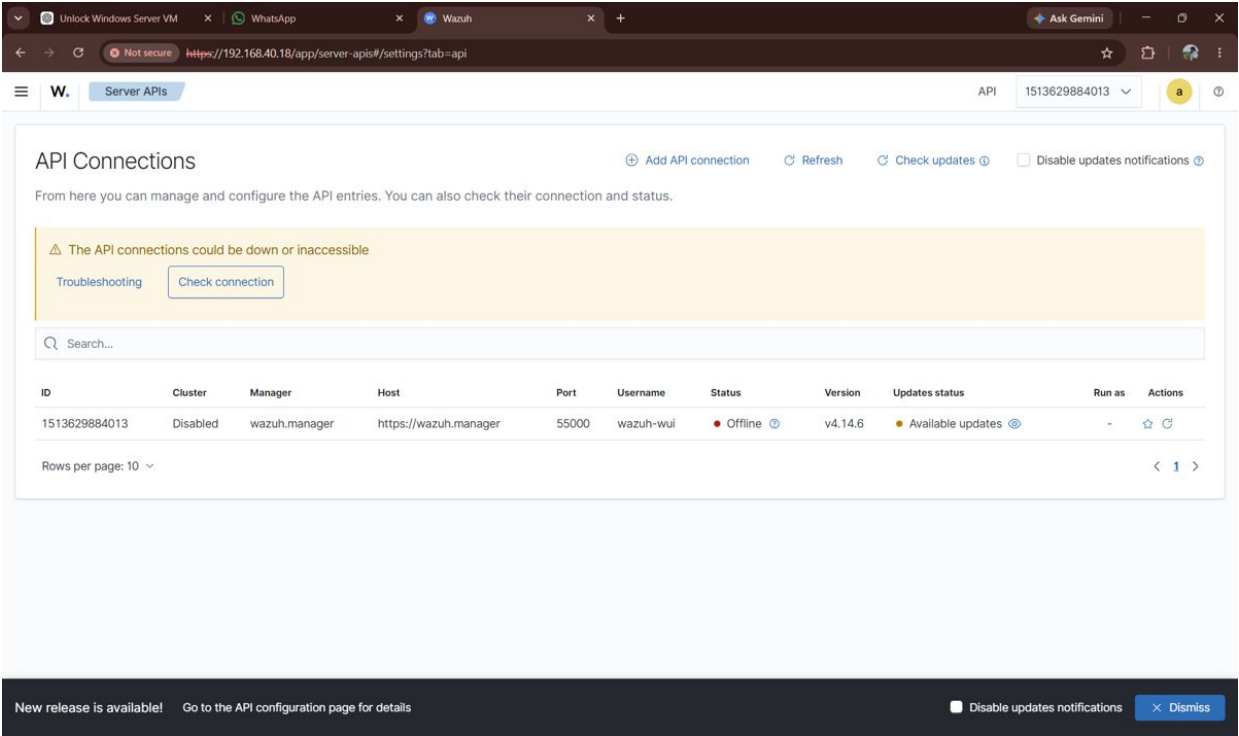

Shows active listening sockets on the Debian host, providing evidence that SSH and Wazuh-related services are available.

08. Debian Wazuh Docker single-node project directory and deployment files.

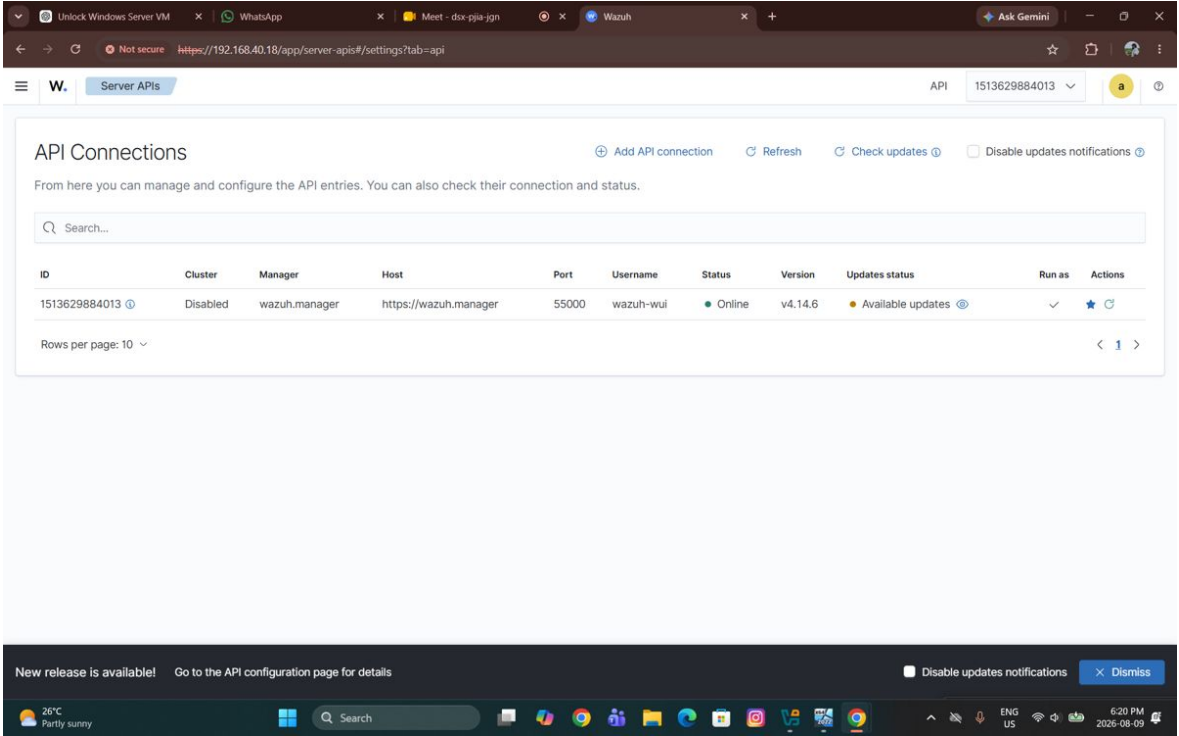

Shows the Wazuh Docker single-node project directory and deployment configuration files used to operate the SIEM environment.

09. Wazuh API Connections interface showing the configured manager connection.

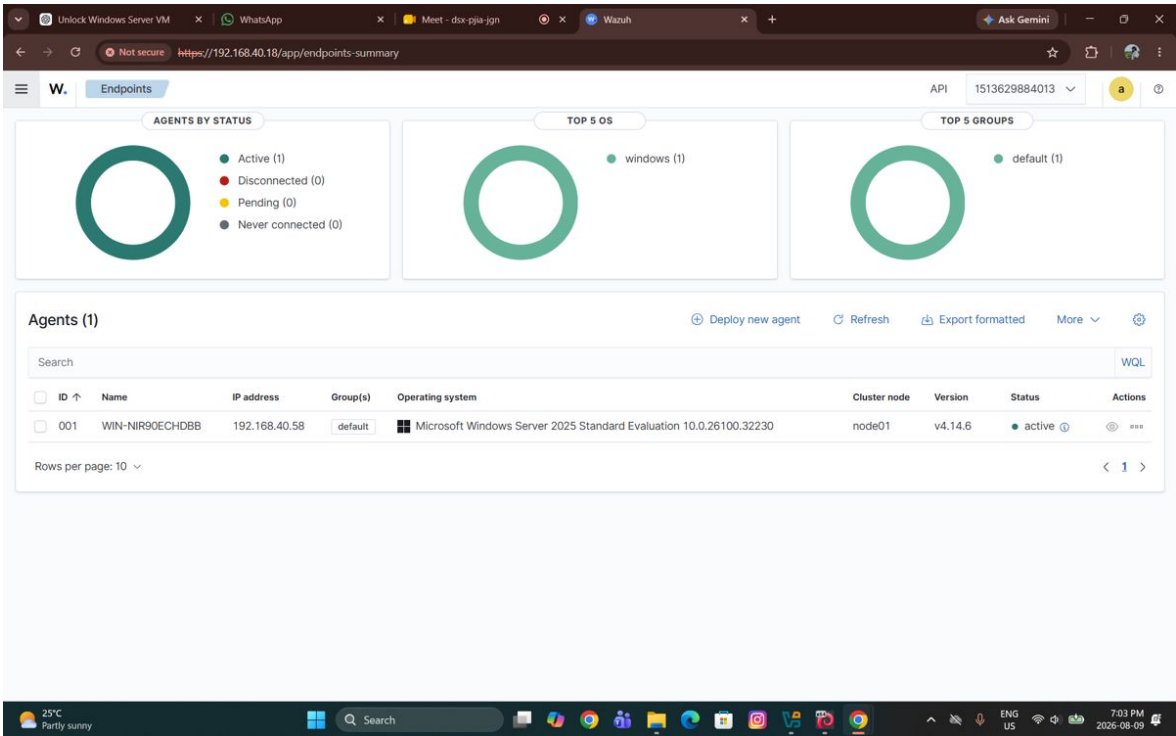

Displays the Wazuh API connection configuration and the manager endpoint used by the dashboard.

10. Wazuh API connection details and manager connectivity validation.

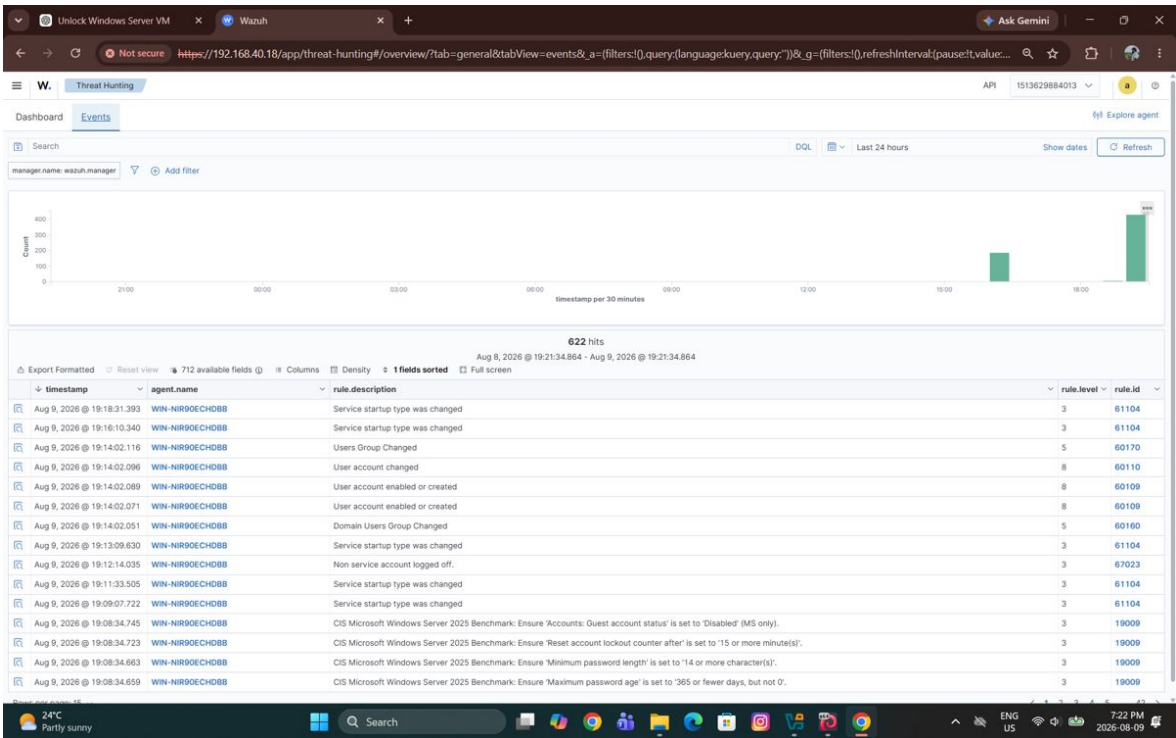

Shows the Wazuh API connection after validation, confirming the dashboard can communicate with the configured manager.

11. Wazuh dashboard/agent view showing endpoint telemetry.

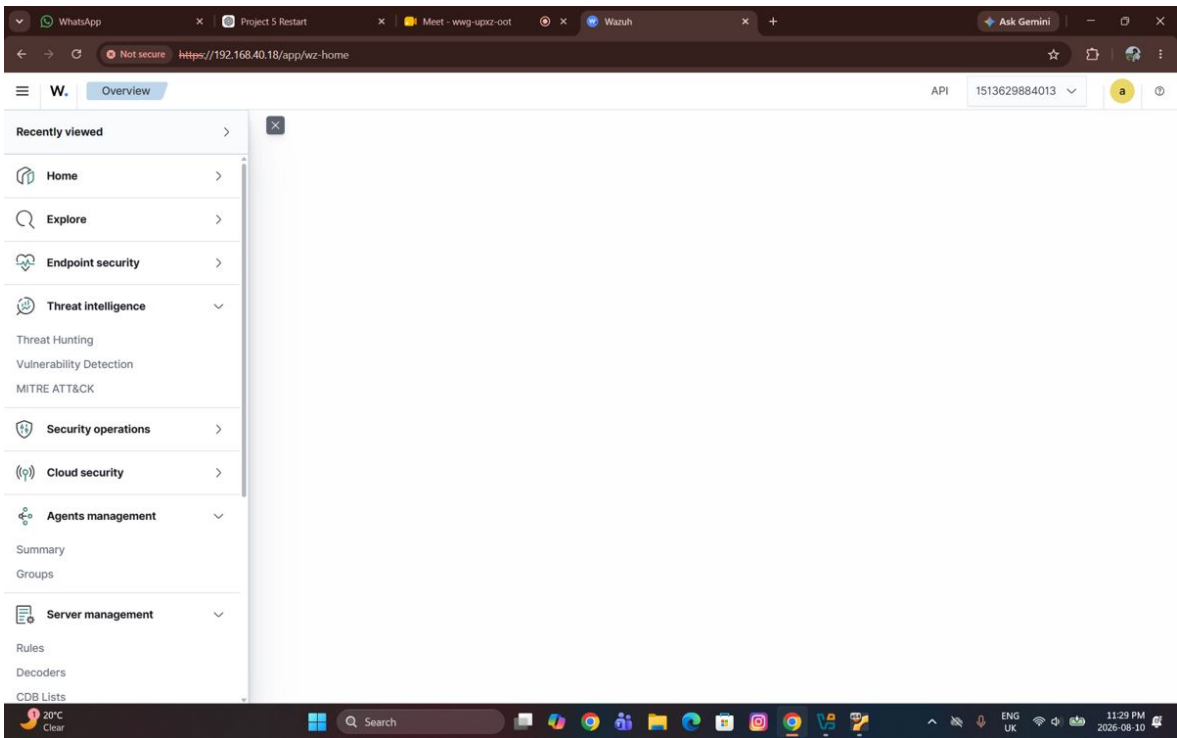

Shows the Wazuh endpoint inventory with the Windows Server agent registered and active.

12. Wazuh interface showing endpoint and event visibility.

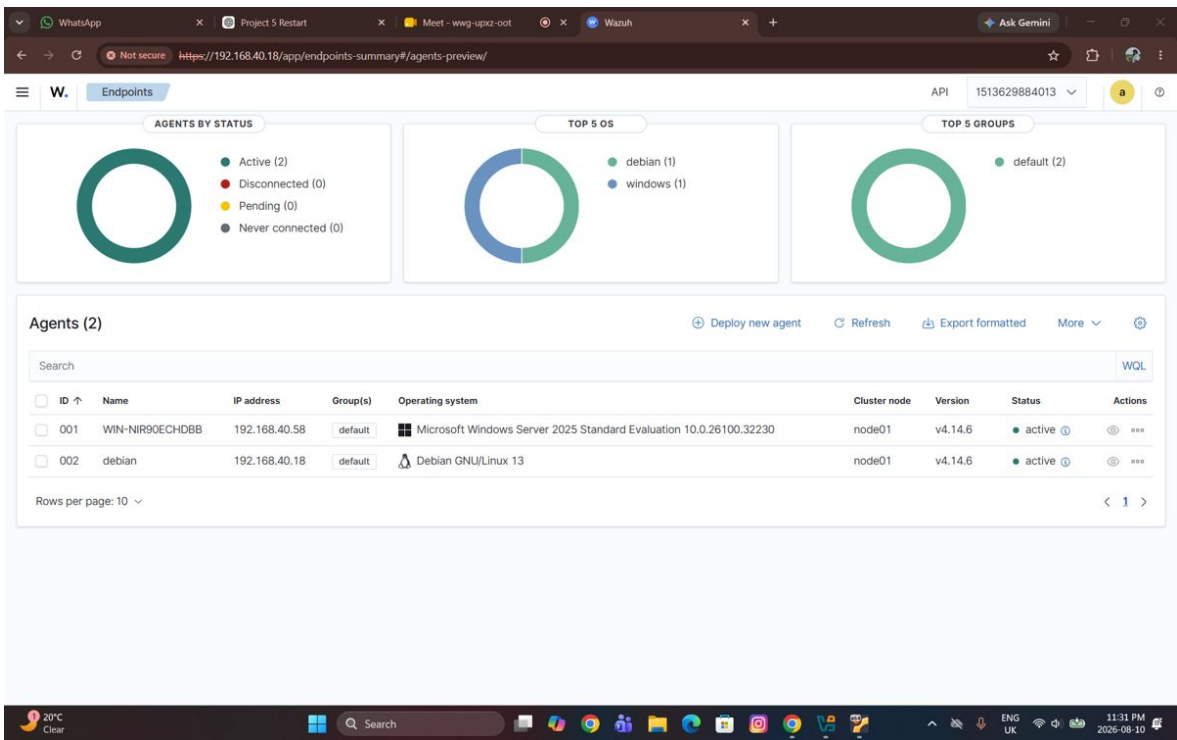

Displays Wazuh threat-hunting/event visibility with endpoint security events available for analysis.

13. Wazuh navigation and endpoint/security operations interface.

Shows the Wazuh security operations interface and available areas for endpoint security, threat hunting, and agent management.

14. Wazuh Agents Management view showing the Windows Server agent.

Shows the managed endpoints and confirms both the Windows Server and Debian agents are active in the Wazuh environment.
